## SPORT UTILITY VEHICLE TIRE

### Wide Centerline Circumferential Groove for Wet Traction with Sweeping Full Tread Face Lateral Grooves

Wide groove resists hydroplaning and loss of control in wet conditions during cornering and lateral maneuvers.

### Large Outer Tread Block

Large outer tread blocks increase the amount of surface area in contact with the road. Improve handling and cornering.

### Small Inside Tread Block and Small Sipe on Tread

Small block for short braking distance and stability. Sipe and small groove enhance road surface adhesion.

Uniform Tire Quality Grading		
Treadwear	Traction	Temperature
300	A	A

Remark: "INSIDE" and "OUTSIDE" on tire sidewalls mean tire fitting in correct position is needed for perfect tire performance.
