

Continental 
The Future in Motion

**Control has never
been sportier.**

The ContiSportContact™ 5.

- ▶ Shorter braking distances in all weather conditions.
- ▶ Excellent road grip and safety when cornering.
- ▶ Reduced fuel consumption and high mileage.

Unlimited driving fun thanks to excellent grip.

Technical highlights.

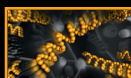

Shorter braking distances in all weather conditions.

When braking, the tyre has a high natural frequency within the compound. Short-chain polymers in the Black Chili compound of the ContiSportContact™ 5 react to this braking frequency and thus provide optimal energy absorption. The resulting heat shortens the braking distance on wet and dry roads.

Excellent road grip and safety when cornering.

The Macro-block design of the tyre's outside shoulder provides a larger contact area, which can therefore adapt optimally to the road surface. The ContiSportContact™ 5 offers improved road grip and thus more safety when cornering.

Reduced fuel consumption and high mileage.

At a constant speed, the vibrations in the compound are significantly lower. The longchain polymers within the compound can release the absorbed energy better, resulting in considerably reduced rolling resistance. Thus, the tyre runs more easily and remains cool

- for a higher mileage and a reduced fuel consumption.

Tyre performance
