reasonable consumer*

OPTIMO MEO4

H429

Premium-level practical tyre for reasonable consumer

Dry handling

Wet handling

Mileage

Low noise

Adopting premium-level 4 Groove

In consideration of rainfall-intense weather, 4 Groove is adopted to improve braking and water control and its excellent draining feature has been proven through the cutting-edge test of wet test track of Korea Tyre that is the only one available in Korea.

Maximization of adjust stability through the premium-level center rib block

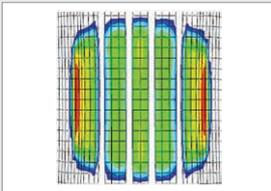

By considering various domestic road environments, the center rib block is applied to improve straight stability and braking capability.

Realization of low noise through applying the premium-level 5 pich

Various cross-section angles are applied on the block edge part to realize the optimal braking capability.

Optimal ground image through high-tech simulation

Abnormal abrasion is minimized by realizing the pressure on optimal tread ground part through the high-tech simulation.

Foot Print simulation

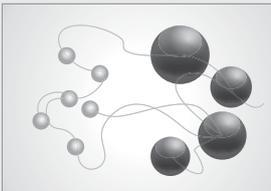

Actual Image of Foot Print

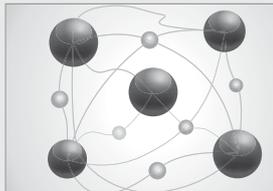

Realizing Excellent Mileage as the first Long Life Carbon (LLC)

LLC(Long Life Carbon)

By improving the combination of the carbon molecule, outstanding abrasion-resistance is asserted.

Carbon black low dispersion, short rubber molecule branch

Carbon black high dispersion, long rubber molecule branch
