The toughest off-road tire wild runner

Hankook Tire & Technology

The toughest off-road tyre wild runner.

Kontrol Technology is Hankook Tire's technology philosophy which reflects how the tyre should perfectly control the interaction between the driver, the car and the road while in motion. It is implemented to ensure Hankook Tire provides the greatest benefits and driving experiences to customers in terms of safety, driving comfort, handling, performance and environmental friendliness. The Dynapro MT is an example of a tyre which embodies Kontrol Technology.

Improved off-road stability

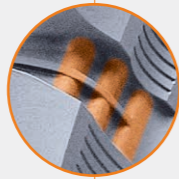

Stone ejector

Stone ejectors in the centre and shoulder grooves help prevent tyre damage from stones or external impacts whilst enhances handling confidence.

Under-groove protector

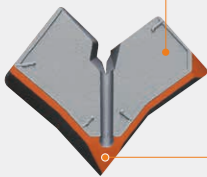

The tyre shoulders are most vulnerable to objects protruding from off-road surfaces. Hankook Tyre has added a unique under-groove protector to prevent impact damage and soften external shock for greater driving safety.

Excellent traction

'V'-shaped center block

The shape, reminiscent of an iceberg, not only looks great but grabs the surface under any condition for superior traction.

Tapered block edge

The block edge tapers to a sharp oblique angle, improving the ability to dig into soft ground.

Zigzag shoulder lugs

Zigzag shoulder pattern delivers greater off-road traction. (dry : 100km/h, wet : 80km/h)

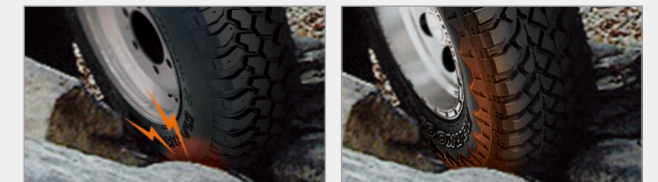

Open and wide grooves

Grooves are shaped to keep dirt out and provide the greatest grip.

Side protection block

A side protection block from the tread pattern to the centre of the sidewall has an appealing rugged look and shields against the shock of protruding objects. This also improves traction in soft dirt and protects pothole damage.
