Sidewall shield

## Durability

**The most extreme off-road tire Hankook offers to date,  
providing remarkable off-road traction maintaining on-road performance.**

## Functional extreme sidewall

Deep and aggressive traction-shield sidewall provides extra biting edges and off-road traction. Scalloped shoulder lugs provide additional biting edges, which is especially helpful in rocky terrain.

### A Extended thicker shoulder

Angled V-shape shoulder scallops for additional off-road grip and protects the sidewall by deflection of protruding objects. Helps prevent sidewall splitting.

### B Sidewall bump protector

Series of bumper protector is designed to protect the sidewall area. Objects are deflected away to protect sidewall against penetration.

## Terrain-strike tread design

Massive open tread pattern are designed for high traction in mud, dirt, sand and gravel. Self-cleaning high groove channel provides extra off-road traction.

### C Connected shoulder tread

By connecting the tread and shoulder part, power through mud and soil condition and delivers improved high off-road traction.

### D Terrain wide tread design

By our engineering 3D simulation, optimized the pattern design. Provide ultimate off-road traction while keeping on-road and quietness.

# Engineered for durability

Provides the most excellent durability, impact resistance and handling.

## E High turn-up three ply sidewall

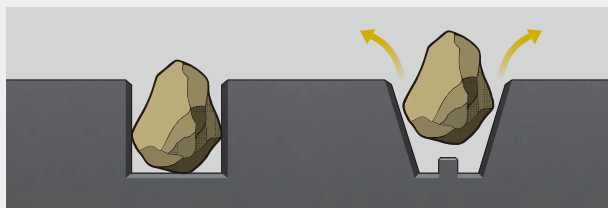

Provide endurance to the most cruel off-road condition. is a Falken proprietary technology developed to endure the most punishing off-road conditions. DURASPEC also features two high ply turn-ups that provide an additional layer of protection.

## F Mud and rock defender

Stone ejectors protect the tread grooves against stone drilling and puncturing. Also shed the mud and stones from the tread grooves to maximize the grip.
